

SP Fire Research now offers testing of kitchen stove guards.

We have a test set-up ready for standard type testing of kitchen stove guards according to the new prEN 50615 "Particular requirements for devices for fire prevention and suppression for electric hobs (cooktops)".

The test-set up can be used for testing of stove guards for the standard defined hob with 6 plates as well as stove guards intended for smaller hobs.

If the stove guard is integrated in a fan, the test set-up can easily be adapted to this.
