

# COMMON PRODRISK – SHOP API

Michael Belsnes & Hans Ivar Skjelbred

# Aktivitities related to API developement

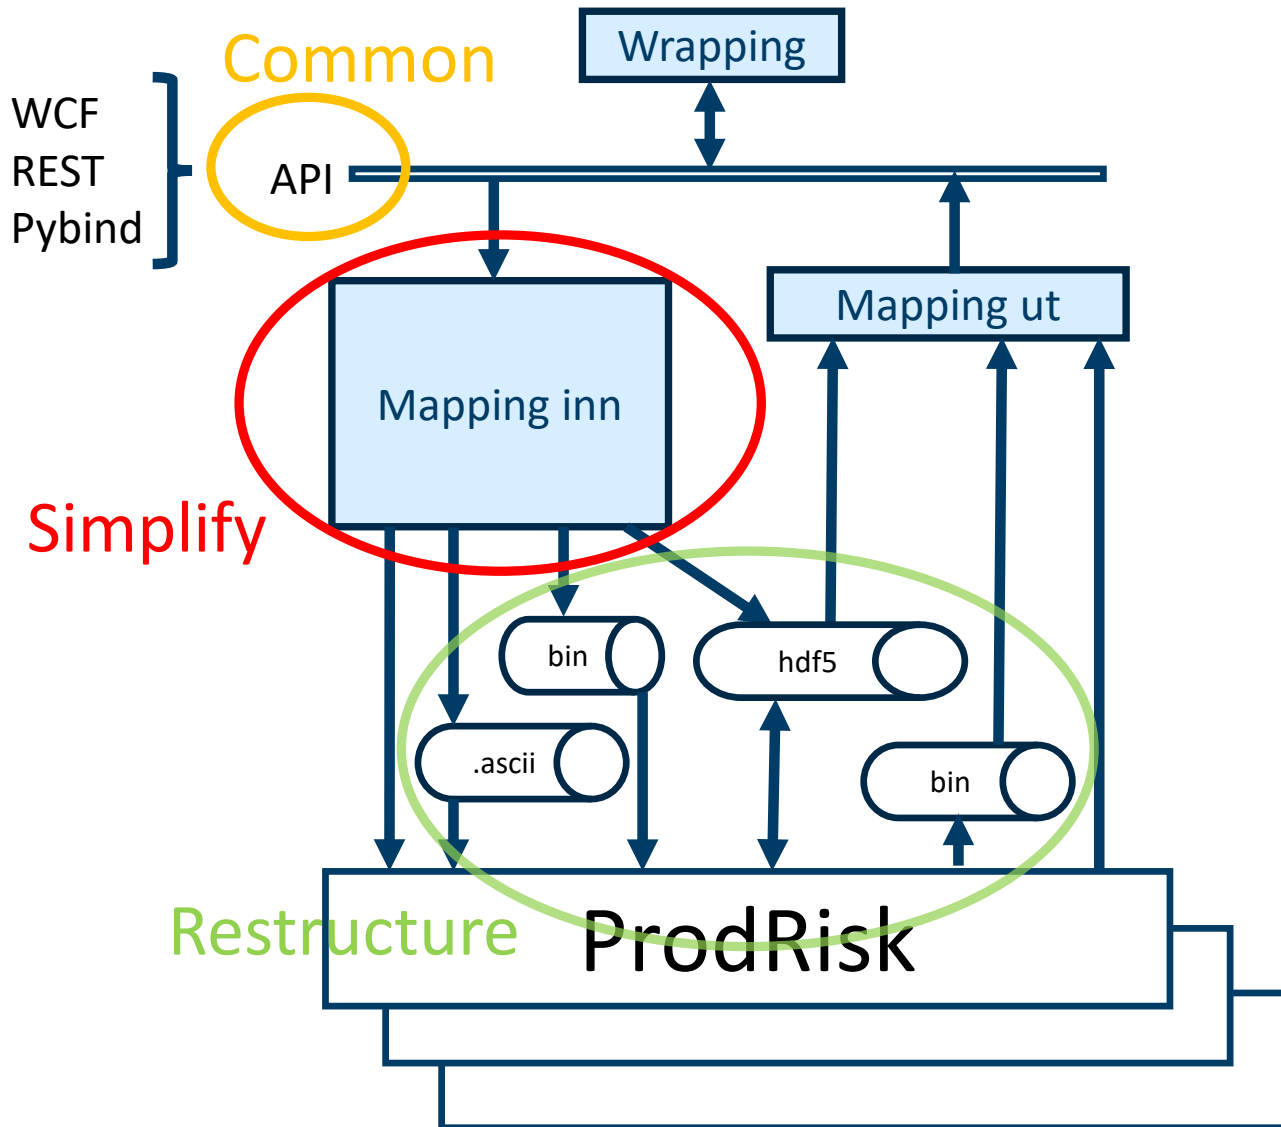

# SDK – Software Development Kit

- Example of how to use the API to program a integration of the model.
- The SDK, as we see it, has an open source license administered by SINTEF and consistent with the SHOP release.
- If it is possible to re-use the methods and tools in the SDK across SINTEF software we assume that the user and SINTEF will increase efficiency both.

# ProdRisk – SHOP API

- Currently we have differences between the ProdRisk and SHOP API's
- It is complicated to make "mapping" for ProdRisk due to use of several internal formats and dependencies in the input files.
- We have opened a new license funded project for the API (Yellow) and the mapping (Red)
