

Impedance Spectroscopy for PEM Fuel Cells

Mark E. Orazem

Department of Chemical Engineering
University of Florida, Gainesville, FL

- Sunil Roy, Bernard Tribollet, Helena and Jason Weaver
- UF/NASA Hydrogen Research Program, Gamry Instruments

Electrochemical Impedance Spectroscopy

- Electrochemical technique
 - In-situ
 - transient
 - sensitive
- Measurement in terms of macroscopic quantities
 - total current
 - averaged potential
- Not a chemical spectroscopy

For many systems: EIS yields a physical description

- Electrode-Electrolyte Interface
 - Electrical double layer
 - Diffusion layer
 - Kinetics
- Electrochemical Reactions
- Transport Processes

EIS has a BAD reputation for energy research

- Technique over-sold
- Questionable data
 - Nonstationary behavior
 - Instrument artifacts
 - nonlinearity
- Too much information – technique is too sensitive
- Interpretation in terms of electrical circuits
 - Models not unique
 - Models not connected directly to chemistry/physics
- Nonuniform distributions of reactivity
- Use of a CPE

Constant Phase Element (CPE)

Semi-Circle

$$Z = R_e + \frac{R_t}{1 + j\omega C_0 R_t}$$

Depressed Semi-Circle

$$Z = R_e + \frac{R_t}{1 + (j\omega)^\alpha Q R_t}$$

CPE caused by
distribution of time
constants

The CPE is Controversial

L'alliance **anti-CPE** se noue dans la rue

De nombreux lycéens ont rejoint les cortèges étudiants, hier un peu partout en France, pour protester contre le contrat première embauche. Demain, de nouvelles manifestations auront lieu à l'appel des syndicats de salariés ainsi que des principales organisations lycéennes et étudiantes P.3 à 5

Dans Marseille, hier.

GERARD BULLEVAP

Liberation 20 March, 2006

Une «crise profonde»

Selon notre sondage, seuls 6% des Français défendent le CPE «en l'état».

La Croix 17 March, 2006

CPE: Contrat Première Embauche
(First Employment Contract, 2006)

CPE: Constant Phase Element

Semi-Circle

$$Z = R_e + \frac{R_t}{1 + j\omega C_0 R_t}$$

Depressed Semi-Circle

$$Z = R_e + \frac{R_t}{1 + (j\omega)^\alpha Q R_t}$$

PEM Fuel Cell

R. Makharia, M. F. Mathias, and D. R. Baker, *J. Electrochem. Soc.*, 152 (2005) A970.

Error Analysis by Measurement Model

High-frequency artifacts extend to negative imaginary values

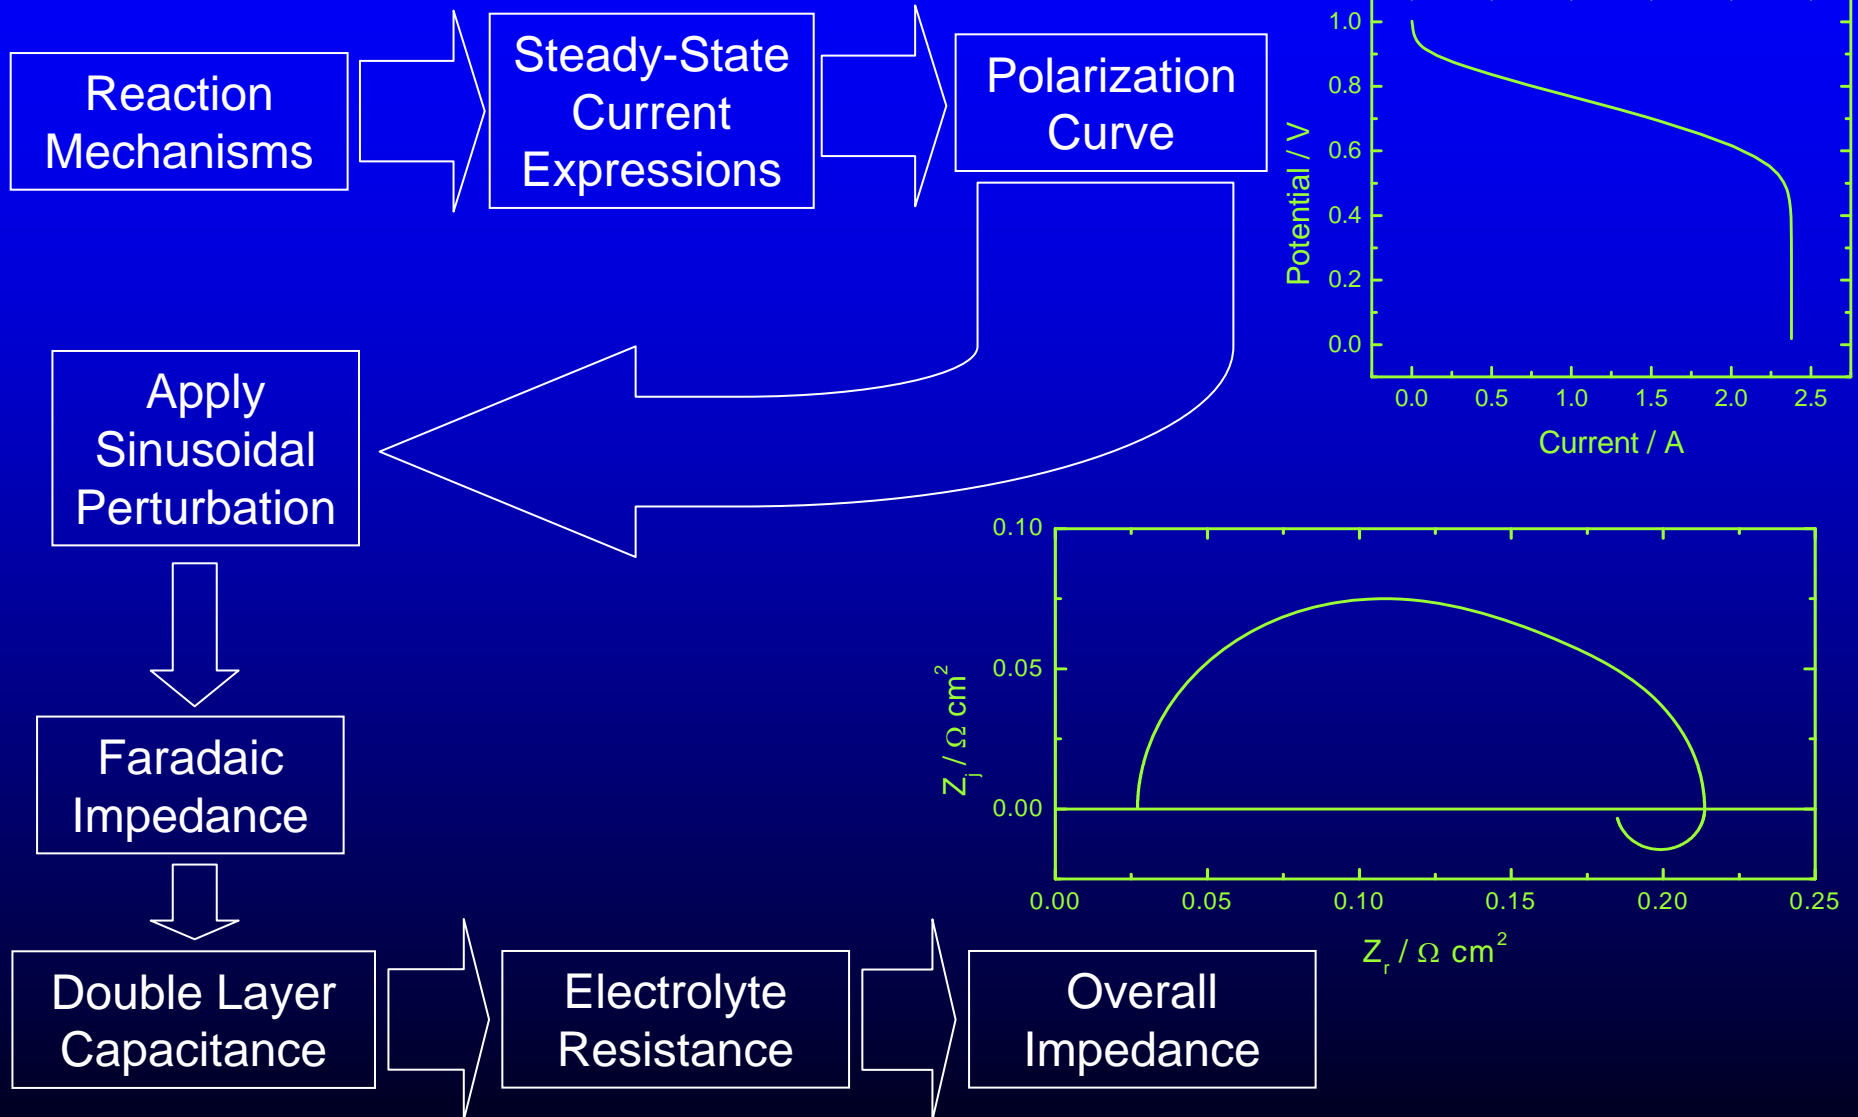

Impedance Data after Measurement Model Analysis

S. K. Roy, M. E. Orazem, and B. Tribollet, *J. Electrochem. Soc.*, **154** (2007), B1378.
S. K. Roy and M. E. Orazem, *J. Electrochem. Soc.*, **154** (2007), B883.

Process Model Development

Steps in Model Development

Proposed Reaction

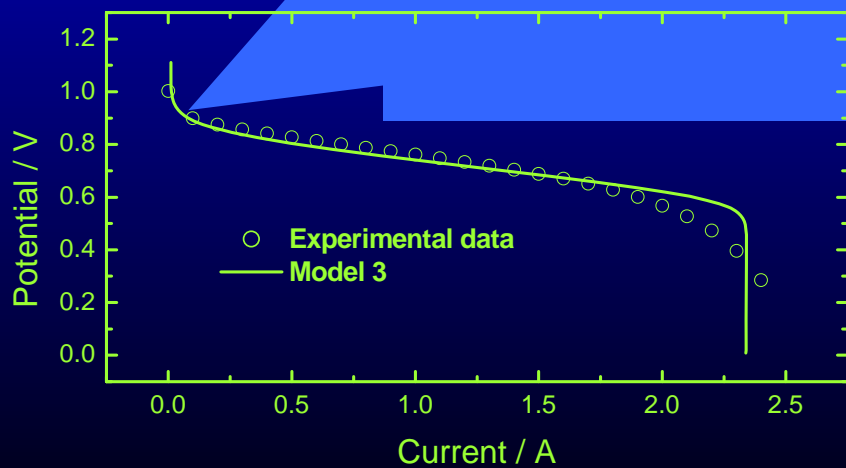

- Oxygen Reduction

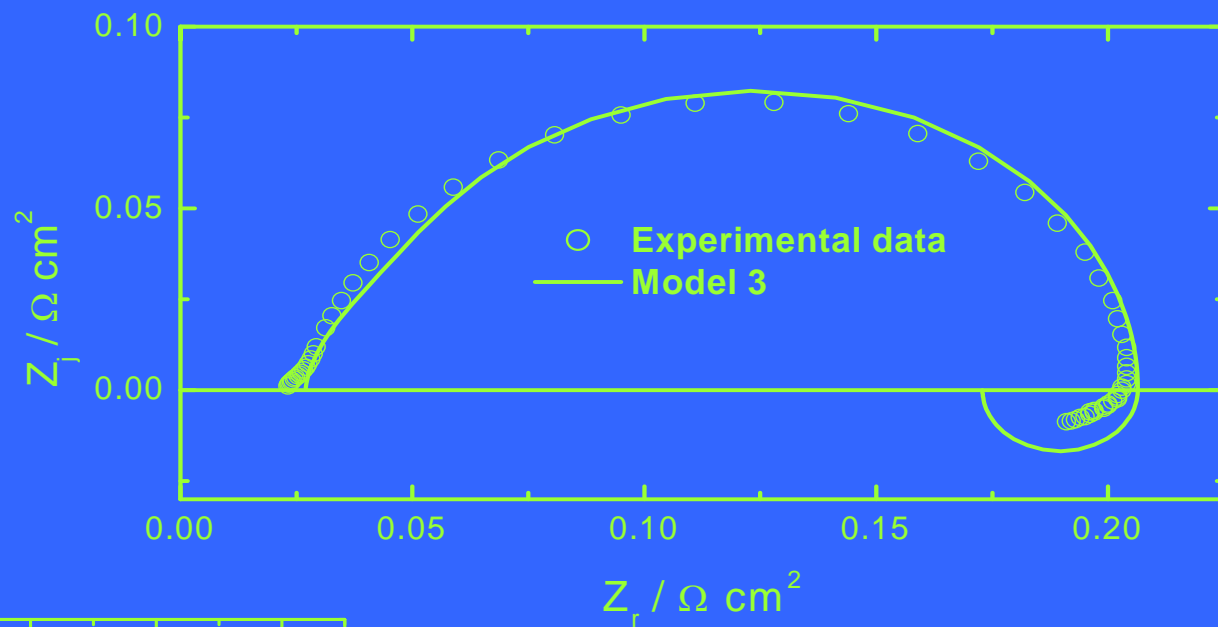

- Hydrogen Oxidation

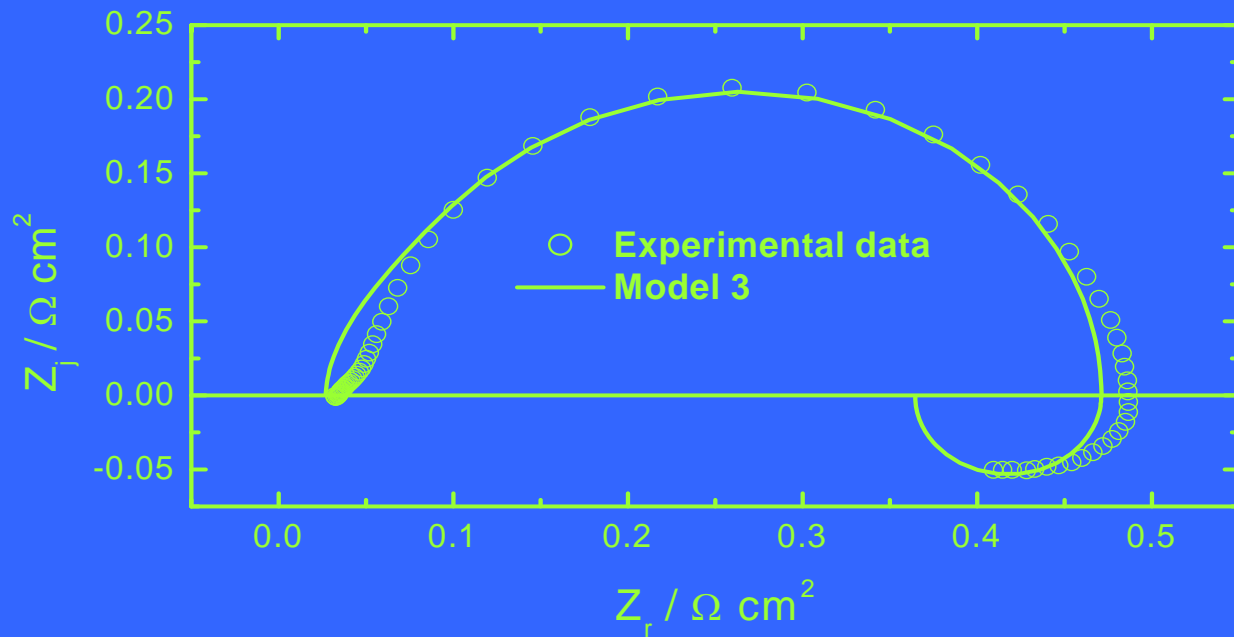

Comparison to Data

Comparison to Data

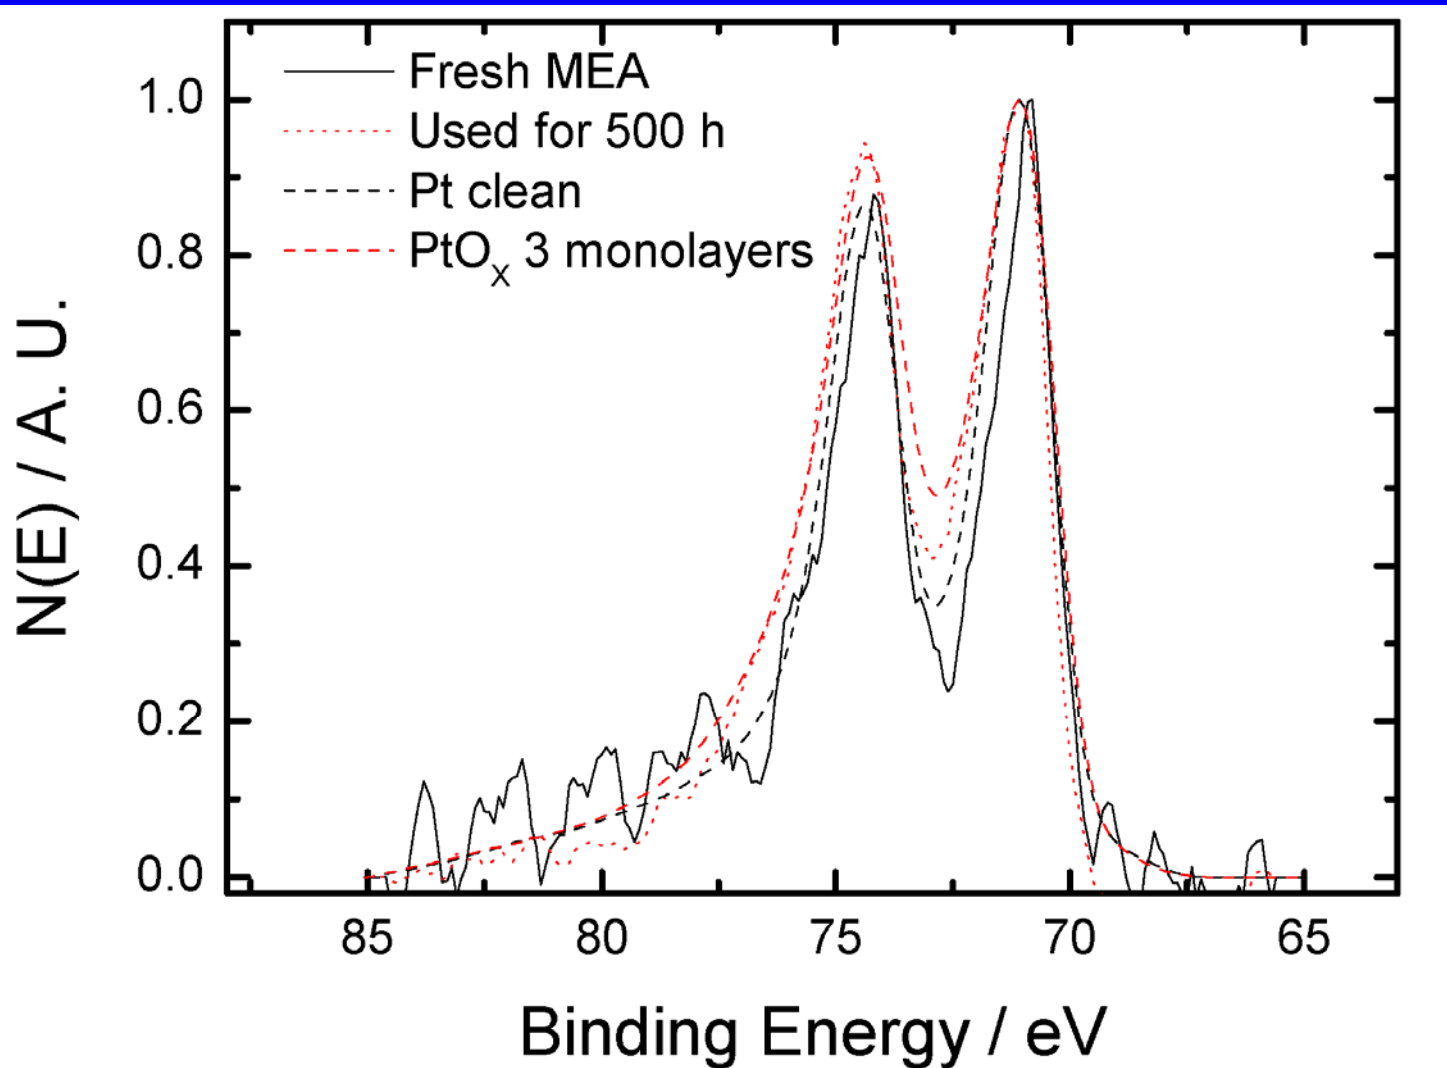

Comparison to Data

Model development suggests supporting experiments

- Formation of PtO
- Reduction in electrochemically active area
- Dissolved Pt in outflow

Evidence for PtO_x

Electrochemical Impedance Spectroscopy

- Electrochemical Technique
 - In-situ
 - Non-invasive
 - Sensitive to transport, kinetics, surfaces
- Amenable to a Systematic Approach
 - Measurement models
 - Deterministic Models
- Not a Stand-Alone Technique
- Yields Insight
 - Reaction mechanisms
 - Degradation phenomena

Needs/Opportunities for EIS

- Deterministic models
 - reactions
 - transport
 - nonuniform surfaces
- Error analysis
- Correlation to operating conditions
 - noise to flooding/drying
 - features to degradation mechanisms
