

ELDOR deeper into details

The development steps of Integrated & Remote Operations From Martin Linge to generation 4.0 IO

HFC

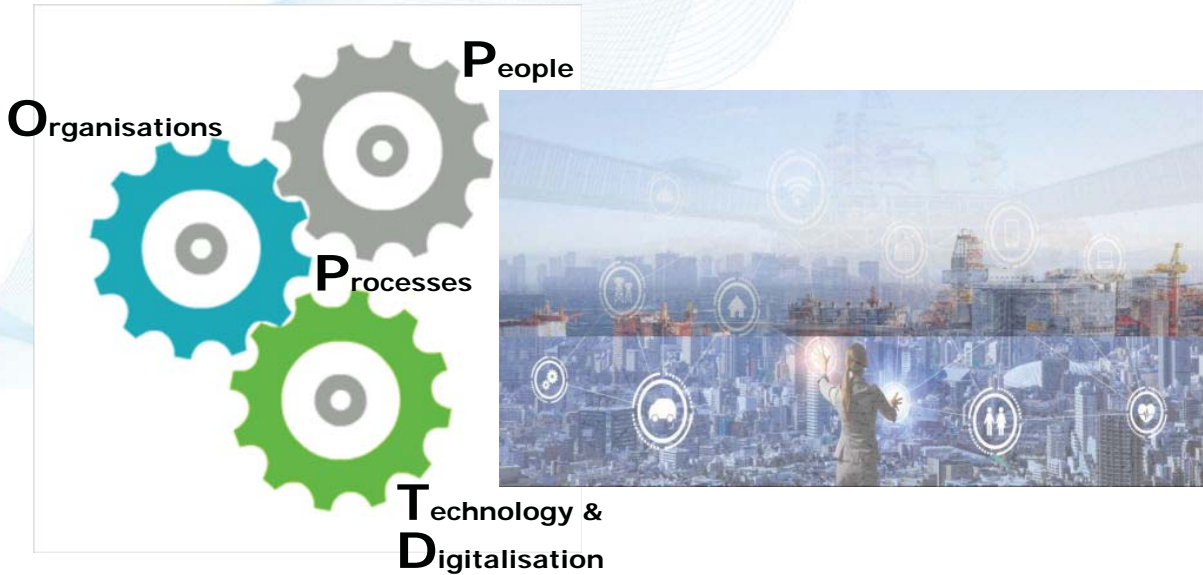

17 October 2018

Integrated Operations = "Use of technology and real time data to achieve safer, faster and better decisions. Collaboration across disciplines, companies, organizations and geographical boundaries/locations"

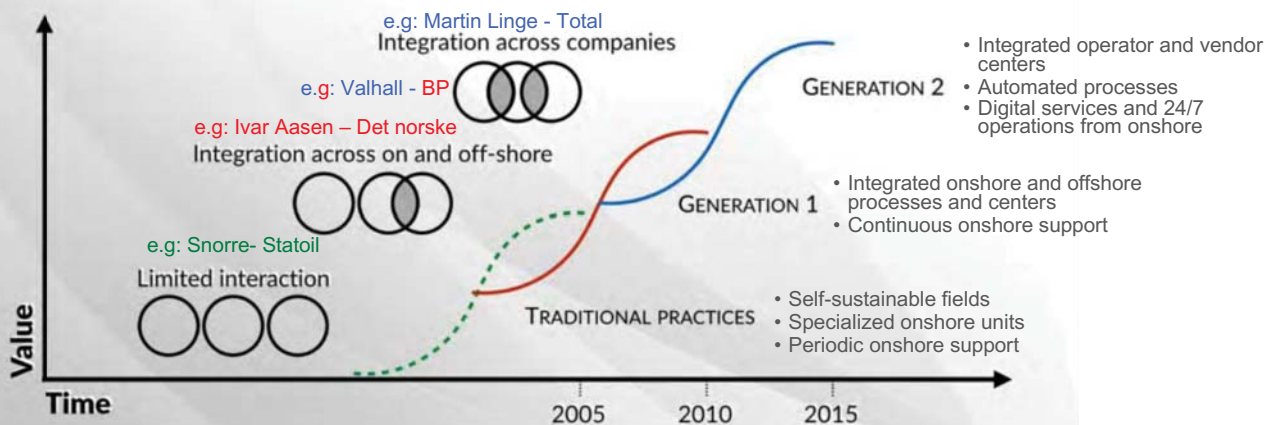

Integrated & Remote Operations

The "PPTO" - perspective – Seamless and improved collaboration & Remote Operations

4 Martin Linge – A step against generation 2

Integrated Operations = Collaboration across disciplines, companies and organizational and geographical boundaries, made possible by real time data and new work processes, in order to reach **safer and better decisions - faster**

5

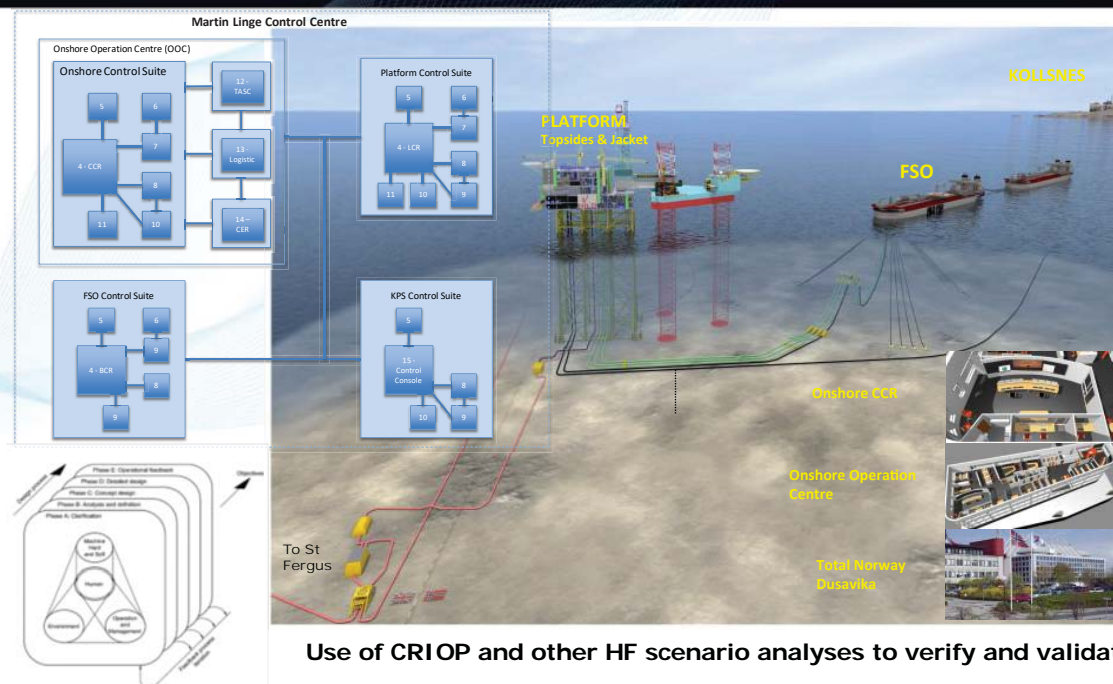

Martin Linge Operating Philosophy

By use of extended implementation of Integrated & Remote Operations

- ▶ The ML O&M Philosophy states that the main objectives for Martin Linge Integrated & Remote Operations are to:
 - ▶ integrate all aspect of IO; People, Process, Technology and Organization
 - ▶ make quicker and better informed decisions in a distributed organization, based on right time information available to all disciplines independent of location throughout the field lifetime
 - ▶ achieve full condition monitoring and performance of equipment and systems by access to all field data from onshore, including data needed for production optimization and drilling performance
 - ▶ create working arenas and utilize technology suited for safer, quicker and better informed decisions

- ▶ The aim for Martin Linge is:
 - ▶ to work closer and more integrated together with selected vendors and service contractors (ref. the OLF IO Generation 2 model)

6 Martin Linge Control Centre according to ISO 11064 definition

Digitalisation – A step towards IO generation 4.0

Our definition:

Applying **digital technologies**,
changes to people and
work processes to
increase production efficiency
while minimising environmental impact
and improving the safety of the people involved.

8

Some of the digital enabling technologies

REAL TIME CONNECTIVITY

CLOUD COMPUTING / STORAGE

VIRTUAL AND AUGMENTED REALITY

ARTIFICIAL INTELLIGENCE

IOT AND SENSORS

BIG DATA / ANALYTICS

AUTOMATIC PRODUCTION/ ROBOTICS

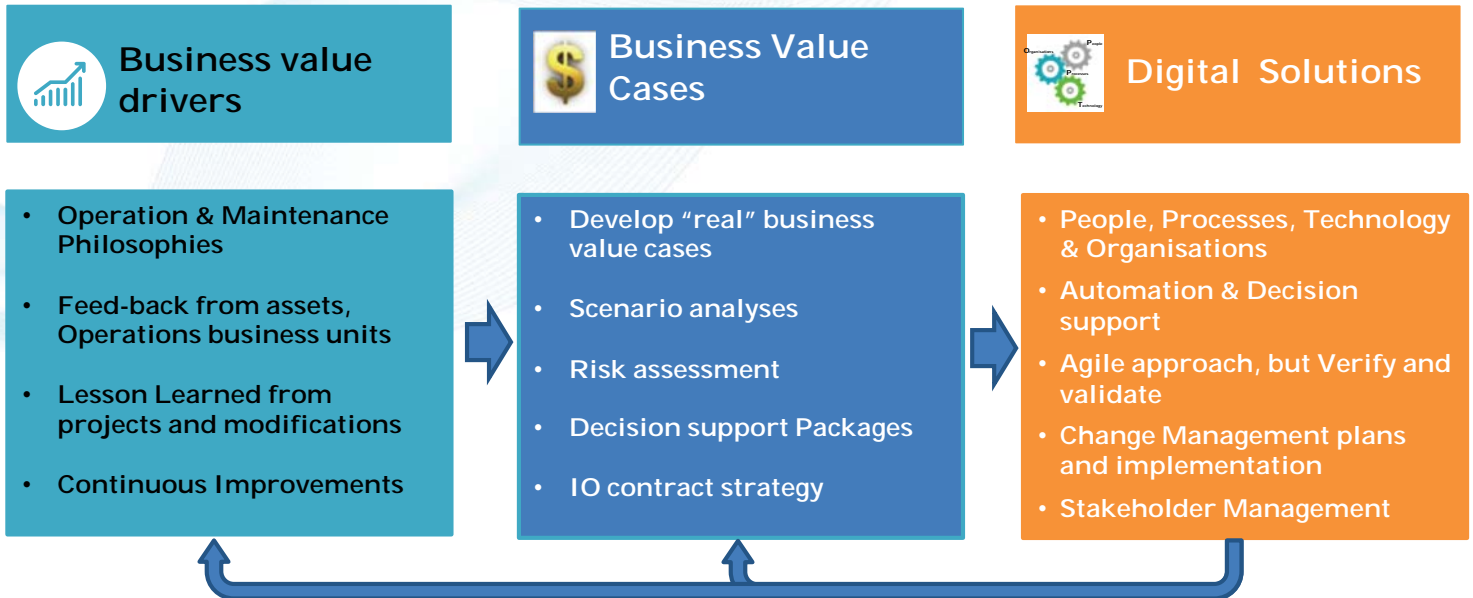

CYBER SECURITY REMOTE ACCESS

3D SCANNING / PRINTING

Multifield Control Centres

- ✓ How do we define it?
- ✓ What is the limitations?
- ✓ Is it across industries?
- ✓ What competency and expertise is required for the future Multifield CC
- ✓ How to change the way of working and people involved?
