# Basin-scale assessment for CO<sub>2</sub> storage prospectivity in the Province of Québec, Canada

Michel Malo and Karine Bédard

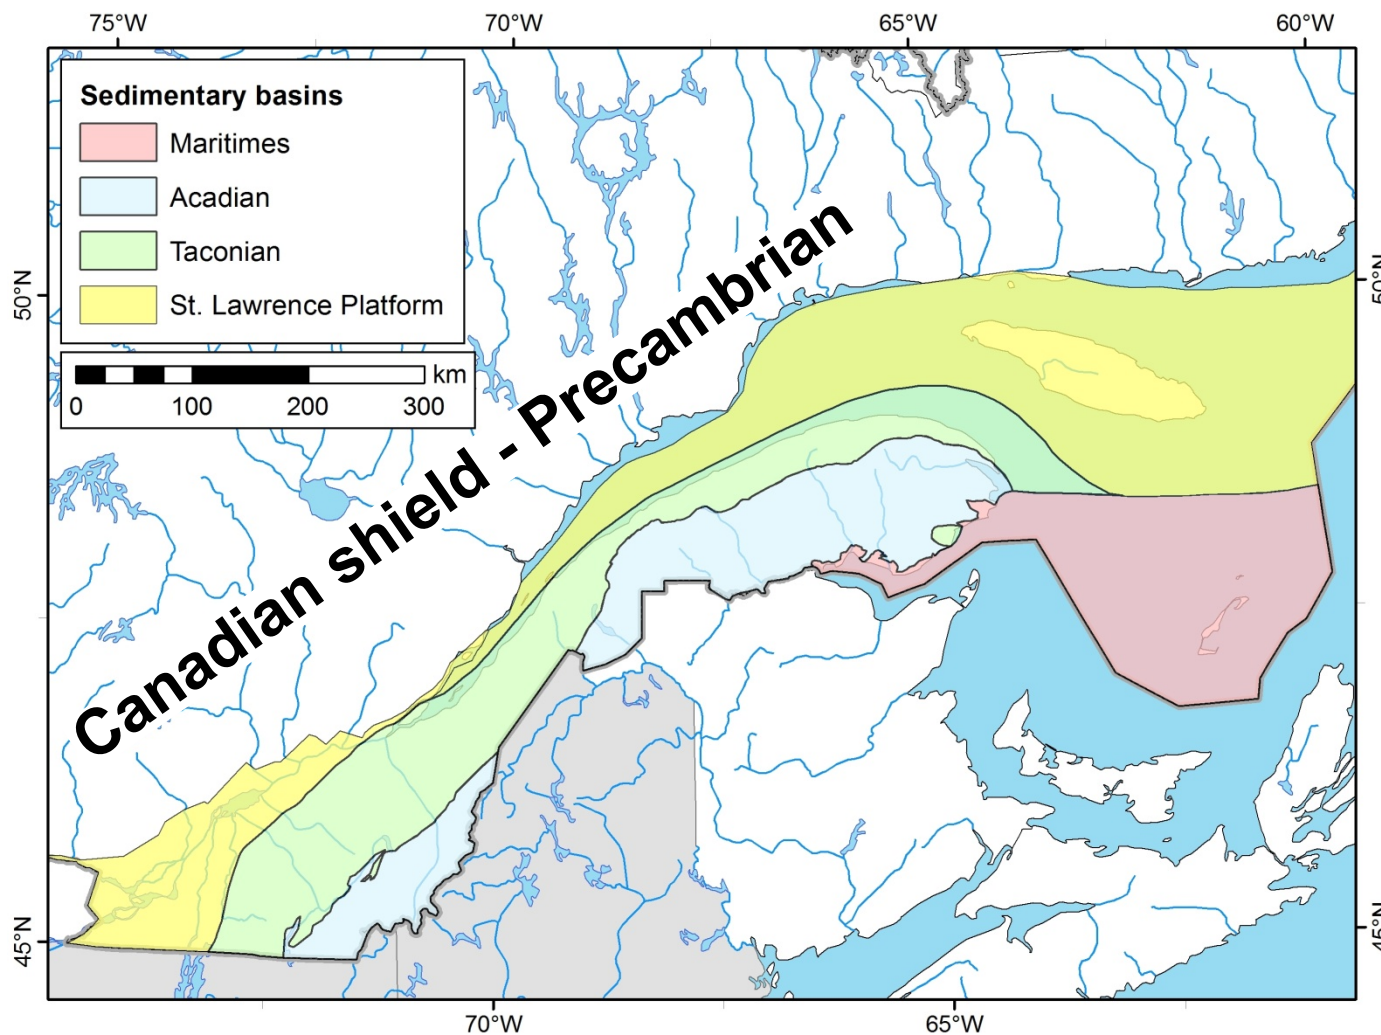

6<sup>th</sup> Trondheim CCS Conference, Norway

June 15, 2011

# The Province of Québec in Canada

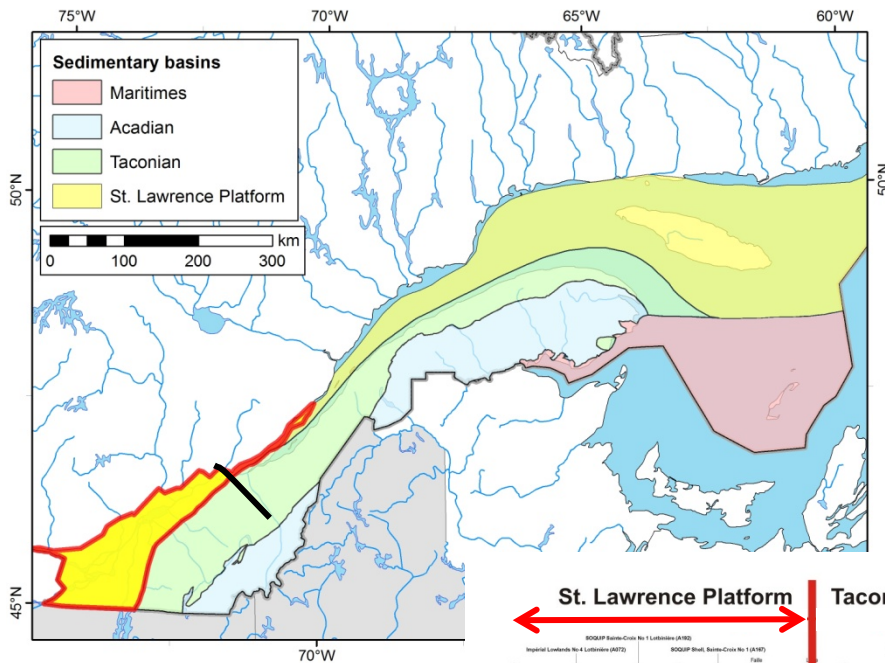

# Paleozoic sedimentary basins in Québec

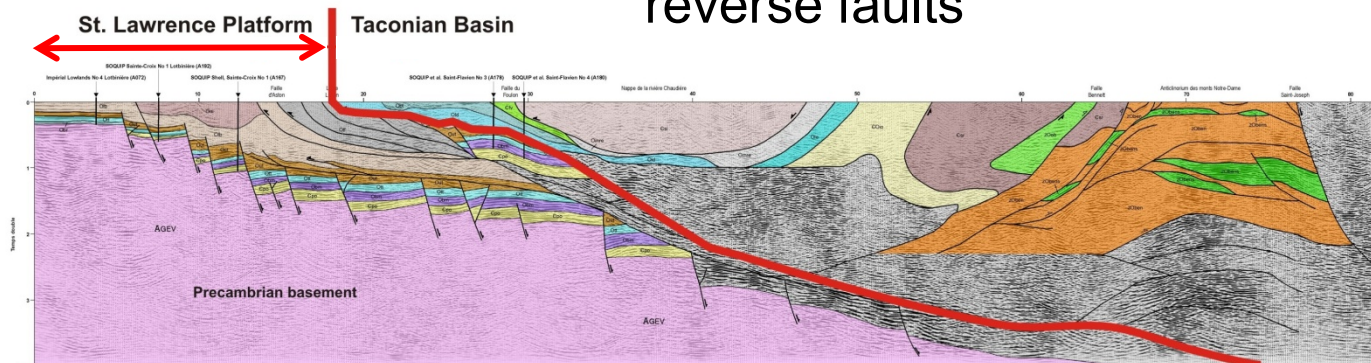

# St. Lawrence platform basin

## St. Lawrence Lowlands sub-basin (Cambrian to Upper Ordovician)

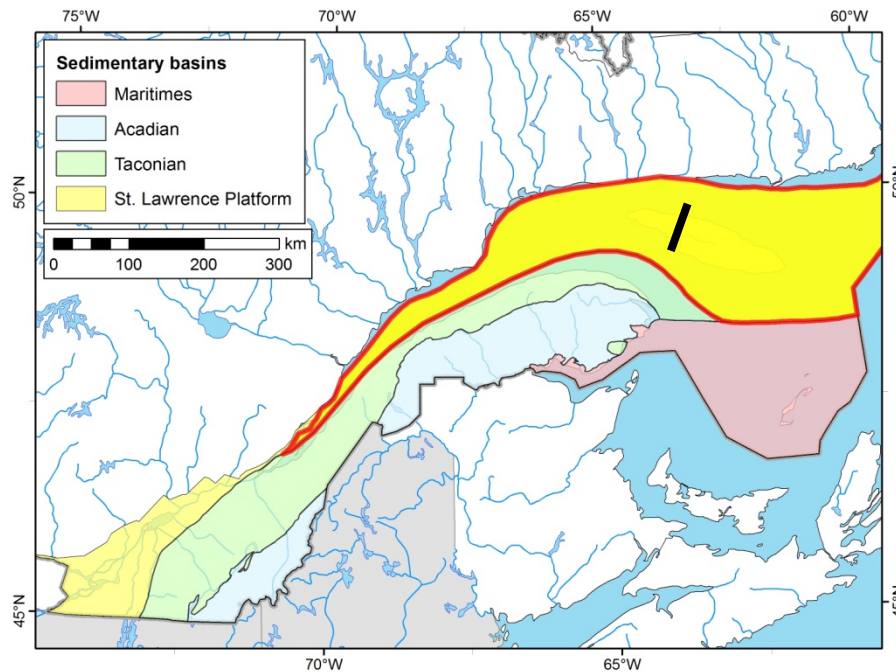

- Complete platform sequence
- From the base to the top:
  - Basal sandstone, dolomite, carbonate, shale and turbidite of the foreland basin
- Limited faulting
  - Synsedimentary normal faults re-activated as high-angle reverse faults

# St. Lawrence platform basin

## Anticosti sub-basin (Lower Ordovician to Lower Silurian)

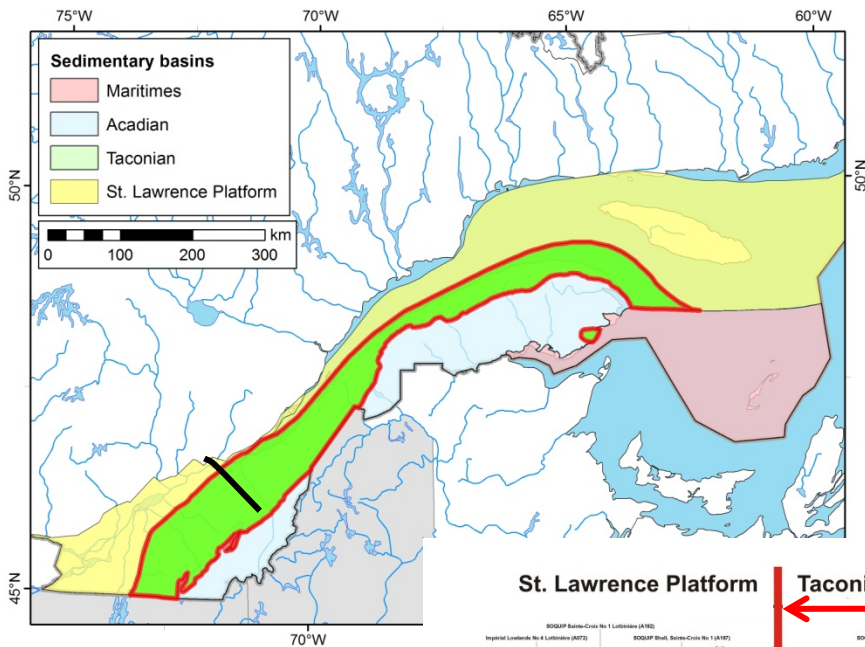

- Carbonate platform
- Limited faulting
  - syn-sedimentary normal faults

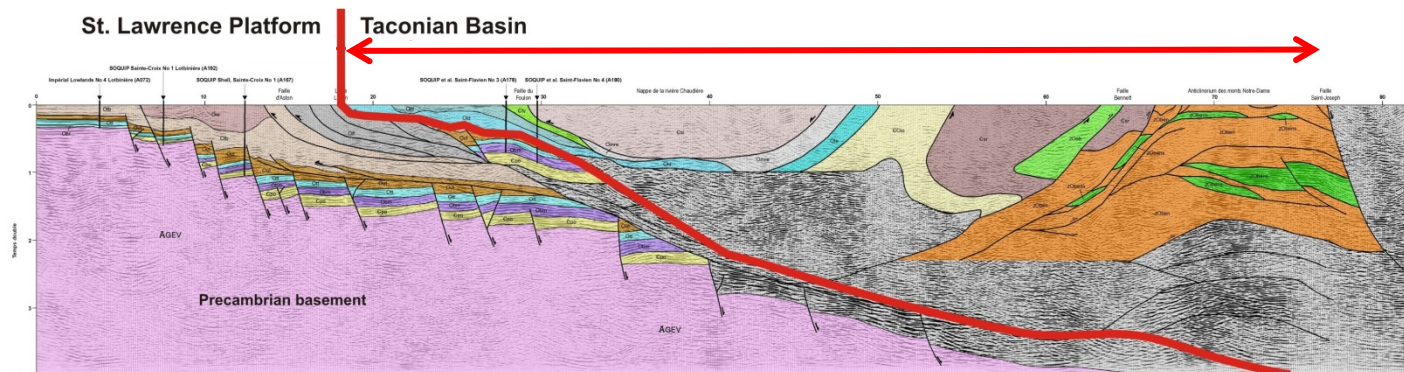

Modified from Castonguay et al. 2005

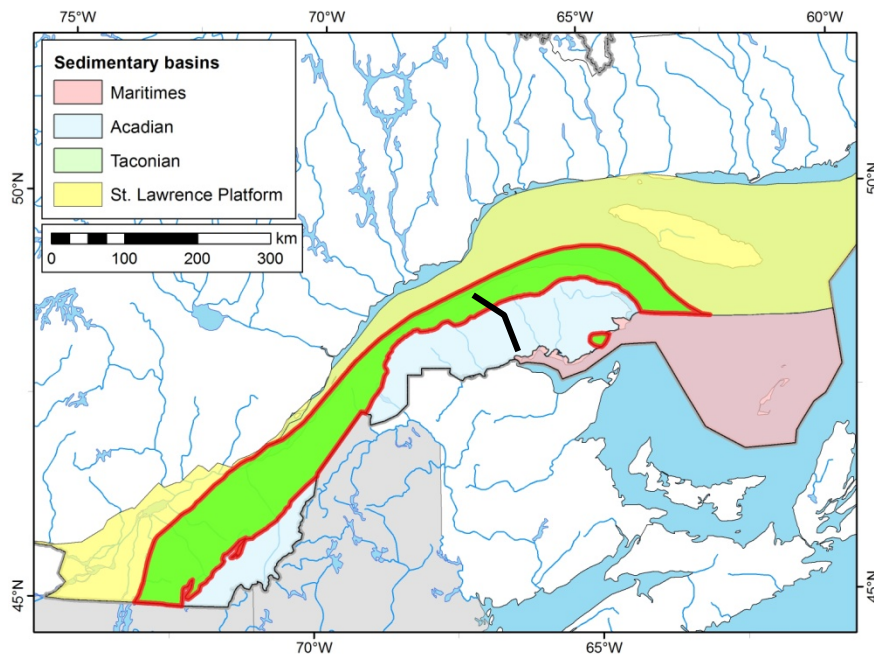

# Taconian basin (Cambrian to Upper Ordovician)

- Cambrian-Ordovician rocks of the Laurentian passive margin and Ordovician rocks of the Iapetus oceanic domain
- Highly faulted and folded during the Mid-Ordovician Taconian orogeny and superimposed Mid-Devonian Acadian orogeny

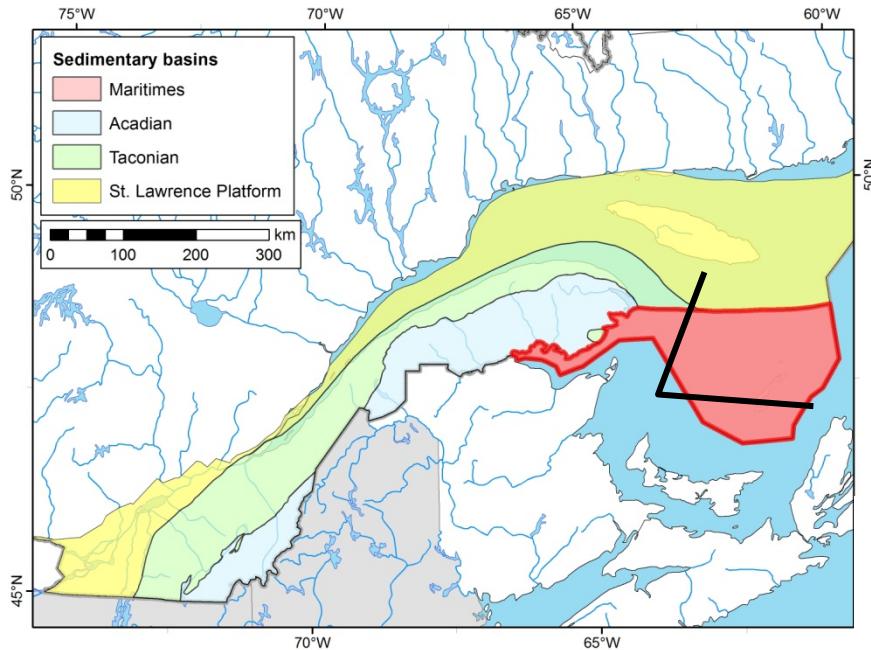

# Acadian basin (Upper Ordovician to Lower Devonian)

- Successor basin after the Taconian orogeny
- Moderate to extensive faulting and folding during the Mid-Devonian Acadian orogeny

## Maritimes basin (Upper Devonian to Permian)

- Successor basin after the Taconian and Acadian orogenies
- Salt domes and coal measures
- Limited extensional and strike-slip faulting

# Methodology for screening and ranking of sedimentary basins

adapted from Bachu (2003) and Kaldi and Gibson-Poole (2008)

- 🌐 **15 criteria**
  - 10 geological
  - 5 practical
- 🌐 **Some criteria are not assessed – hydrogeology, pressure regime**
- 🌐 **Allow objective comparison between basins**

## Geological criteria

	Classes				
	1	2	3	4	5
<b>Seismicity (tectonic setting)</b>	Very high (e.g.: subduction zones)	High (e.g.: syn-rift)	Intermediate (e.g.: foreland)	Low (e.g.: marge passive)	Very low (e.g.: craton)
<b>Size</b>	Very small (<1,000 km <sup>2</sup> )	Small (1,000-5,000 km <sup>2</sup> )	Medium (5,000-25,000 km <sup>2</sup> )	Large (25,000-50,000 km <sup>2</sup> )	Very large (>50,000 km <sup>2</sup> )
<b>Depth</b>	Very shallow (<300 m)	Shallow (300-800 m)	Deep (>3,500 m)	Intermediate (800-3,500 m)	
<b>Deformation (faults &amp; fractures)</b>	Extensive	Moderate	Limited		
<b>Reservoir- seal pairs</b>	Poor	Intermediate	Excellent		
<b>Geothermal</b>	Warm basin (>40°C/km)	Moderate (30-40°C/km)	Cold basin (<30°C/km)		
<b>Hydrocarbon potential</b>	None	Small	Medium	Large	Giant
<b>Evaporites</b>	None	Domes	Beds		
<b>Coal</b>	None	Very shallow (<300m)	Deep (>800m)	Shallow (300-800m)	
<b>Maturity</b>	Unexplored	Exploration	Developing	Mature	Super mature

## Practical criteria

	Classes				
	1	2	3	4	5
<b>On/Off shore</b>	Deep offshore	Shallow offshore	Onshore		
<b>Climate</b>	Arctic	Sub-arctic	Desert	Tropical	Temperate
<b>Accessibility</b>	Inaccessible	Difficult	Acceptable	Easy	
<b>Infrastructure</b>	None	Minor	Moderate	Extensive	
<b>Major CO<sub>2</sub> sources</b>	None	Few	Moderate	Significant	Many

## Numerical values for each criteria and classes and weights assigned to the criteria

$$\sum_{i=1}^{15} w_i = 1$$

		$j = 1$	$j = 2$	$j = 3$	$j = 4$	$j = 5$	Weight $W_i$
$i = 1$	Seismicity (tectonic setting)	1	3	7	15	15	0.10
$i = 2$	Size	1	3	5	8	10	0.06
$i = 3$	Depth	1	2	6	10		0.10
$i = 4$	Deformation (faults & fractures)	1	4	10			0.09
$i = 5$	Reservoir- seal pairs	1	4	10			0.10
$i = 6$	Geothermal	1	4	10			0.08
$i = 7$	Hydrocarbon potential	1	3	7	14	21	0.04
$i = 8$	Evaporites	1	2	3			0.01
$i = 9$	Coal	1	2	5			0.04
$i = 10$	Maturity	1	2	4	8	10	0.08
$i = 11$	On/Off shore	1	5	10	15		0.11
$i = 12$	Climate	1	2	4	7	10	0.04
$i = 13$	Accessibility	1	3	6	10		0.04
$i = 14$	Infrastructure	1	3	7	10		0.05
$i = 15$	Major CO <sub>2</sub> sources	1	3	7	11	15	0.06

## Basin suitability evaluation method

- Each class ( $j$ ) from each criterion ( $i$ ) has a score

- $F_{i,j}$

- Normalized score for each criterion**

- $P_i^k$
  - Class 1 = 0
  - Class  $n$  = 1

$$P_i^k = \frac{F_{i,j} - F_{i,1}}{F_{i,n} - F_{i,1}}$$

- General score of each basin**

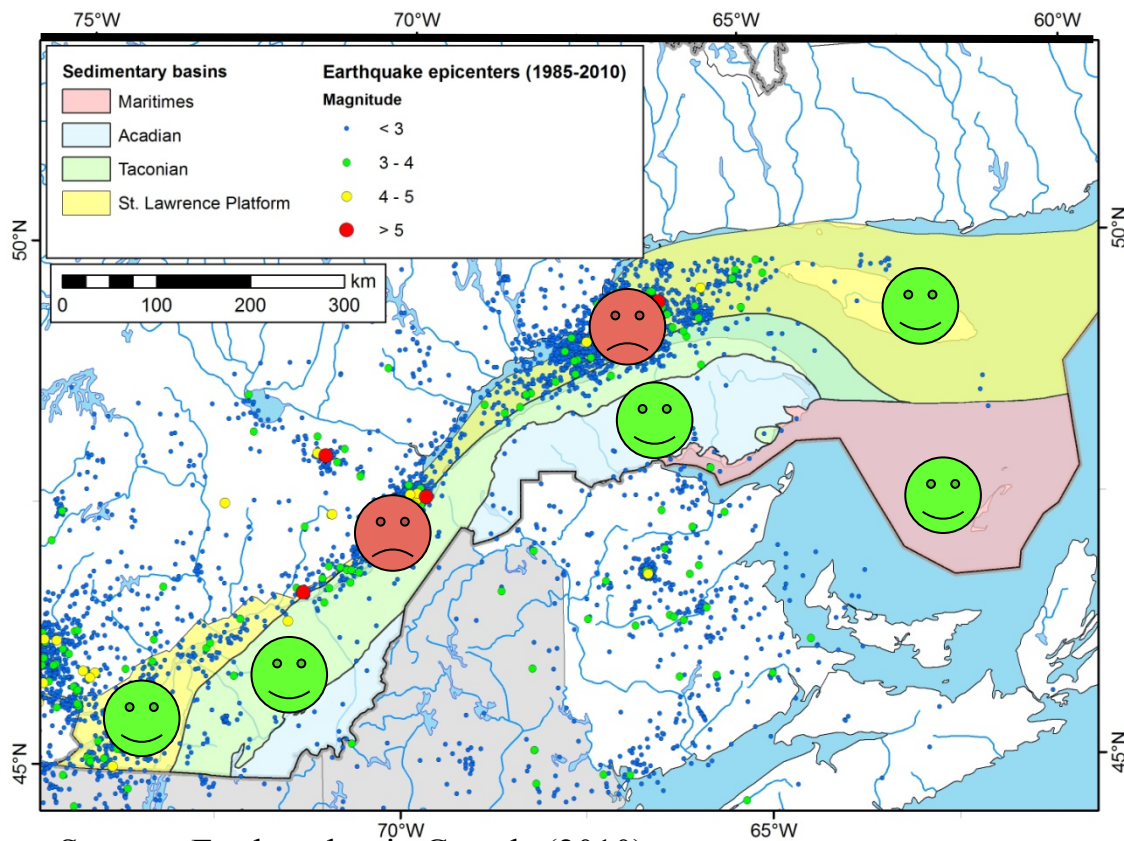

- Weighted mean of the *normalized scores and weights*

$$R^k = \sum_1^{15} w_i P_i^k$$

# Ranking of Québec sedimentary basins

## Conclusions

- 🌍 **The St. Lawrence platform basin is the most prospective basin for CO<sub>2</sub> storage particularly the St. Lawrence Lowlands sub-basin**
- 🌍 **The Maritimes basin must be considered even if it is largely an offshore basin**
- 🌍 **Sites were selected and characterization is ongoing at the Bécancour site**
