

# MineHealth

**2011-2014**

The overall objective of the MineHealth project is to provide long term sustainability of well-being, health and work ability among workers in the mining industry.

### **Arctic Environment**

The project focuses on the unique work environment of mining in the Barents region which is characterized by work in cold conditions. The exposures to be addressed are, besides cold, airborne dust, diesel exhaust, whole body and hand-arm vibration, ergonomics and physical strain.

The outcome include learning material and education plans/programs as well as technical and administrative actions and optimization of arctic miner's clothing and personal protective equipment.
