

SINTEF

# SINTEF Energy Research

We offer cutting-edge knowledge in Norway and internationally based on research that provides for our clients added-value solutions and services. SINTEF Energy Research is part of the SINTEF Group, which is one of Europe's largest independent contract research organisations.

## Strategic focus areas are:

- Energy efficiency
- Carbon capture and storage (CCS)
- Hydropower
- Offshore wind
- Bioenergy
- Smart grids
- Transmission
- Hydrogen
- Offshore energy systems
- Environment friendly transport

Sustainability is at the heart of our research activities. The UN's Sustainable Development Goals represent a global joint strategy to eradicate poverty, combat inequality and stop climate change. The UN defined 17 sustainable development goals, and SINTEF Energy Research contributes towards several of these, the most prominent being:

**Key figures:** SINTEF Energy Research has a staff of 301. Income in 2022 was approx 688 MNOK.

## National centres for Environment-friendly Energy Research

Norwegian Centre for  
Environment-friendly  
Energy Research

With support from the FME and Petrosenter funding programmes, these large research centres has an international impact. SINTEF Energy Research participates in the following centres:

- FME **HYDROGENi** - Norwegian research and innovation centre for hydrogen and ammonia
- ME **NorthWind** - Norwegian Research Centre on Wind Energy
- FME **NTRANS** - Norwegian Centre for Energy Transition Strategies
- FME **Bio4Fuels** - Norwegian Centre for Sustainable Bio-based Fuel and Energy
- FME **CINELDI** - Centre for Intelligent Electricity Distribution
- FME **HighEFF** - Centre for an Energy Efficient and Competitive Industry for the Future
- FME **HydroCen** - Norwegian Research Centre for Hydropower Technology
- FME **NCCS** - Norwegian CCS Research Centre
- FME **ZEN** - The Research Centre on Zero Emission Neighbourhoods in Smart Cities

### Petrocentre

- **LowEmission** - Develops technology and solutions to help the offshore industry meet its emissions reduction goals.

## Laboratory services

In cooperation with the Norwegian University of Science and Technology (NTNU), we have 12,000 m<sup>2</sup> of modern laboratories available for research, development and education. These laboratories are available for national and international researchers and industry.

**SINTEF Energy Lab** is our largest laboratory complex and houses seven separate laboratories, each dedicated to a particular field of operation. The largest and most prominent structure is the high voltage laboratory which is designed to handle system voltages up to 420 kV. SINTEF Energy Lab provides state-of-the-art infrastructure for advanced R&D in SINTEF Energy Research's strategic areas, with a focus on industry-specific applied research.

**The Thermal engineering laboratory** is the largest laboratory for research work within the technologies of refrigeration, low temperature, combustion, thermal engineering, energy and environment.

**The Electrotechnical laboratories** comprise high voltage, high current and climate labs as well as a number of smaller labs for material testing and analyses. They also include special labs for high pressure testing of materials and components for offshore and subsea power systems.

**The national SmartGrid laboratory** is used to study technology and solutions for the sustainable electric power system of the future that will have more variable and distributed power production, flexible consumption and digital solutions.

### National Laboratories for an Energy Efficient Industry

supports better utilisation of available industrial surplus heat and improved efficiency in various industrial processes.

**ElPowerLab** is an international resource for research on the power components and materials of the future.

SINTEF Energy Research is a member of SATS (**Scandinavian Association for Testing of Electric Power Equipment**) and the Short-Circuit Testing Liaison (STL) and cooperates with other laboratories in Scandinavia.

### ECCSEL

SINTEF and NTNU have been appointed by ESFRI (European Strategy Forum on Research Infrastructures) to coordinate the construction of a Pan-European infrastructure within CO<sub>2</sub> capture and storage (CCS). ECCSEL includes advanced scientific laboratory equipment available to guest researcher from the European Union/European economic area.
