

## Visit to VTS Horten

In March-20 the project visited the traffic centre in Horten. The project had firstly a project meeting at Kongsberg Norcontrol, that among other things presented the C-Scope technology and told us more about the traffic centre services they have in their portfolio. After an introduction we went over the traffic centre and got a live presentation on how they are regulating the traffic in to the Oslofjord. We had many interesting discussions with the staff at the traffic centre, and also got a view from them how they in the future can include autonomous ships in to the VTS management. IMAT will thanks the staff at the traffic centre in Horten for an excellent presentation, and fruitful discussions afterwards.
