

Reducing environmental impact and greenhouse gas emissions in commercial fisheries

www.rightfish.eu

Project consortium includes 1 SME: 

Portfolio of Outputs and Next Steps

Outputs

Scale Modelling process/methodology

Scale modelling criteria developed for demersal trawls to enable accurate interpretation of flume and towing tank experiments at full scale.

Low impact environmentally friendly towed gears

Improved tow gears which have reduced drag and lower impact of seabed-contacting components.

Next Steps

Scale model flume tank trials

Full scale experiments at sea

Fishing and engineering performance

Environmental assessment

Socioeconomic assessment
