Traceability in the fish supply chain

Recent food scandals have shown the need for documentation and traceability. SINTEF has extensive experience in developing standards, logistics solutions and electronic traceability systems in the entire fish value chain.

Together with Fiskeriforskning, SINTEF was main actor in the development of the TRACEFISH standards (NS CWA 14659/60).

The TRACEFISH standards which fulfill EU requirements on food safety and traceability, are now being implemented by the industry all around the world.

SINTEF is currently cooperating with the industry to introduce traceability and electronic systems for chain traceability in several large R&D projects, i.e. TELOP TRACE, SEAFOOD PLUS and TRACE.
