James Hargreaves was born near Blackburn in about 1720. Hargreaves received no formal education and was unable to read or write. He worked as a carpenter and weaver but had a strong interest in engineering

Hargreaves's growing success sparked jealousy and fear among his neighbours and, in 1768, an irate mob gathered at Blackburn's market cross and marched to Stanhill, where they smashed the frames of 20 machines he was building in a barn.

A large, dark-colored industrial textile machine, likely a power loom, is shown from a side-on perspective. It features a large flywheel on the right side, connected to a complex system of gears and shafts. The machine is supported by a sturdy metal frame. A white rectangular box is overlaid on the machine, containing text.

Masseproduksjon -- på produsentens premisser

Overkapasitet

Skipsverftet Arsenal i Venezia

16000 MANN på 1500 TALLET

1 skip per dag

Masseprodusert skreddersøm (med håndkraft) !
