

**Strategic research program:**

## **Sustainable renovation of multi storey housing / REBO**

**with focus on environmentally friendly energy use and universal design**

# Aims

- Contribute to new knowledge and change of practise for a ambitious renovation of post war multi storey housing, with focus on:
  - The needs of disadvantaged resident groups
  - Reduced energy need and increased use of environmentally friendly energy sources
  - Universal design

Ammerud, Oslo

# Aims

*Develop, communicate, and implement new knowledge on renovation of multi storey post war housing.*

- *Making visible the needs of the residents and strengthen management and decision processes*
- *Develop recommendations and examples on good technical and architectural solutions to an affordable price*
- *Develop concepts for sustainable renovation*
- *Reveal success criteria for successful renovation*
- *Carry out communications and implement activities that engages.*

Ammerud, Oslo, 1966

# Scope and time

## ■ Scope

- Total 12 mill Nkr.
- 6 mill Nkr. - activities that are a part of ZEB - The research centre on zero emission buildings.

## ■ Time

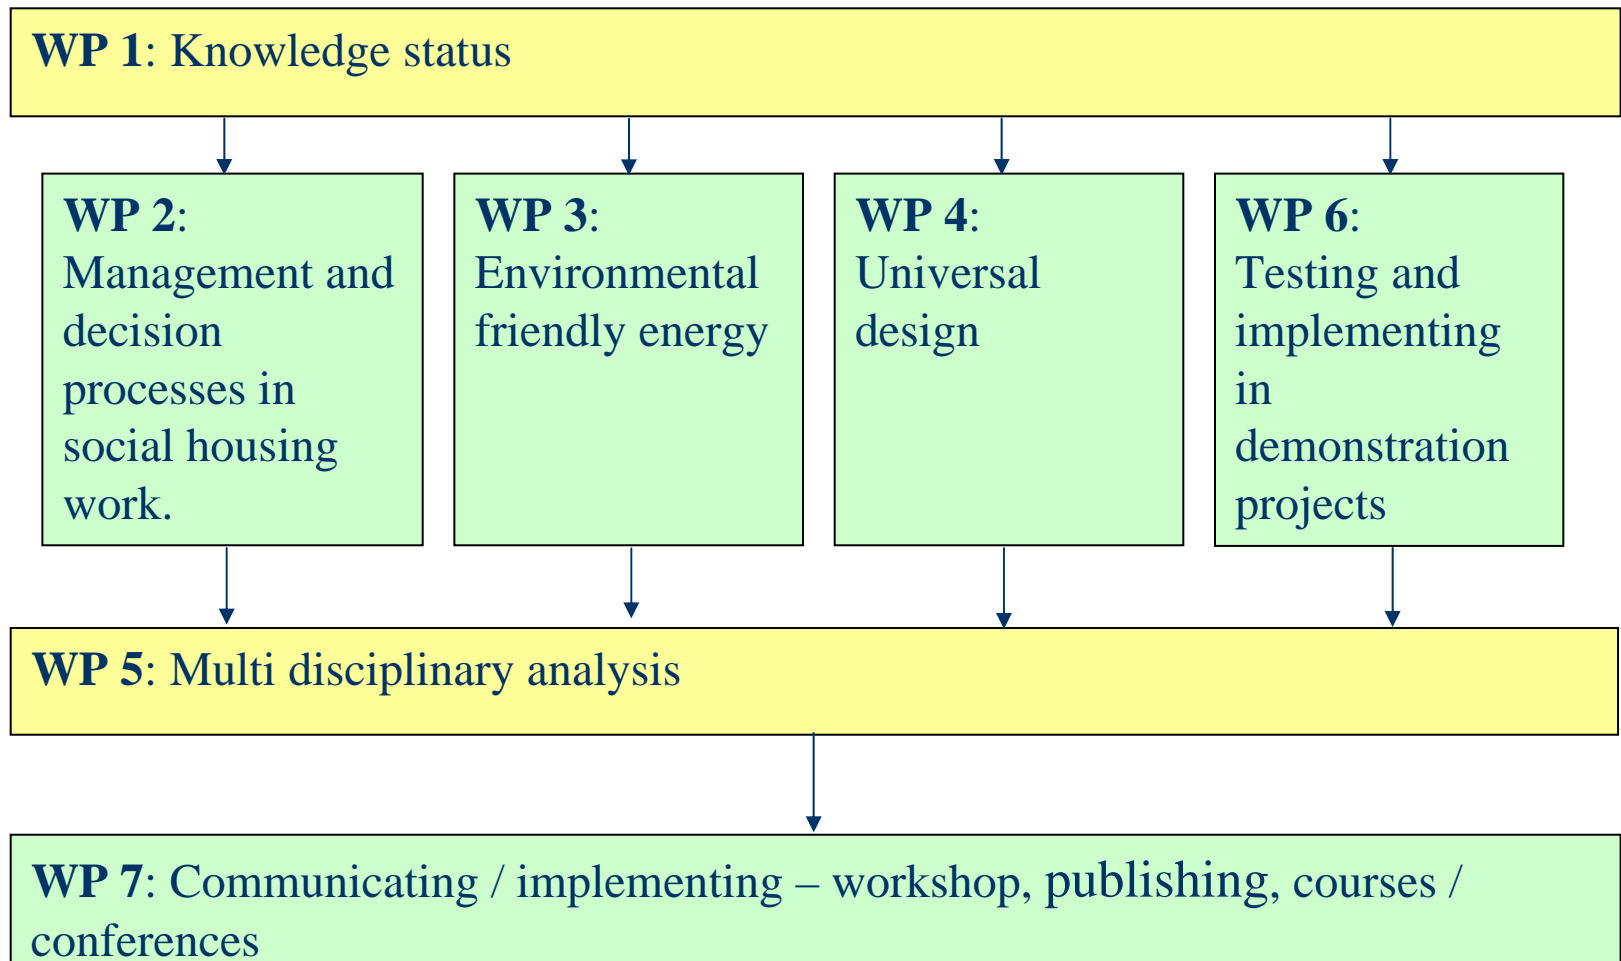

- Program period:  
December 2008 – June 2012.

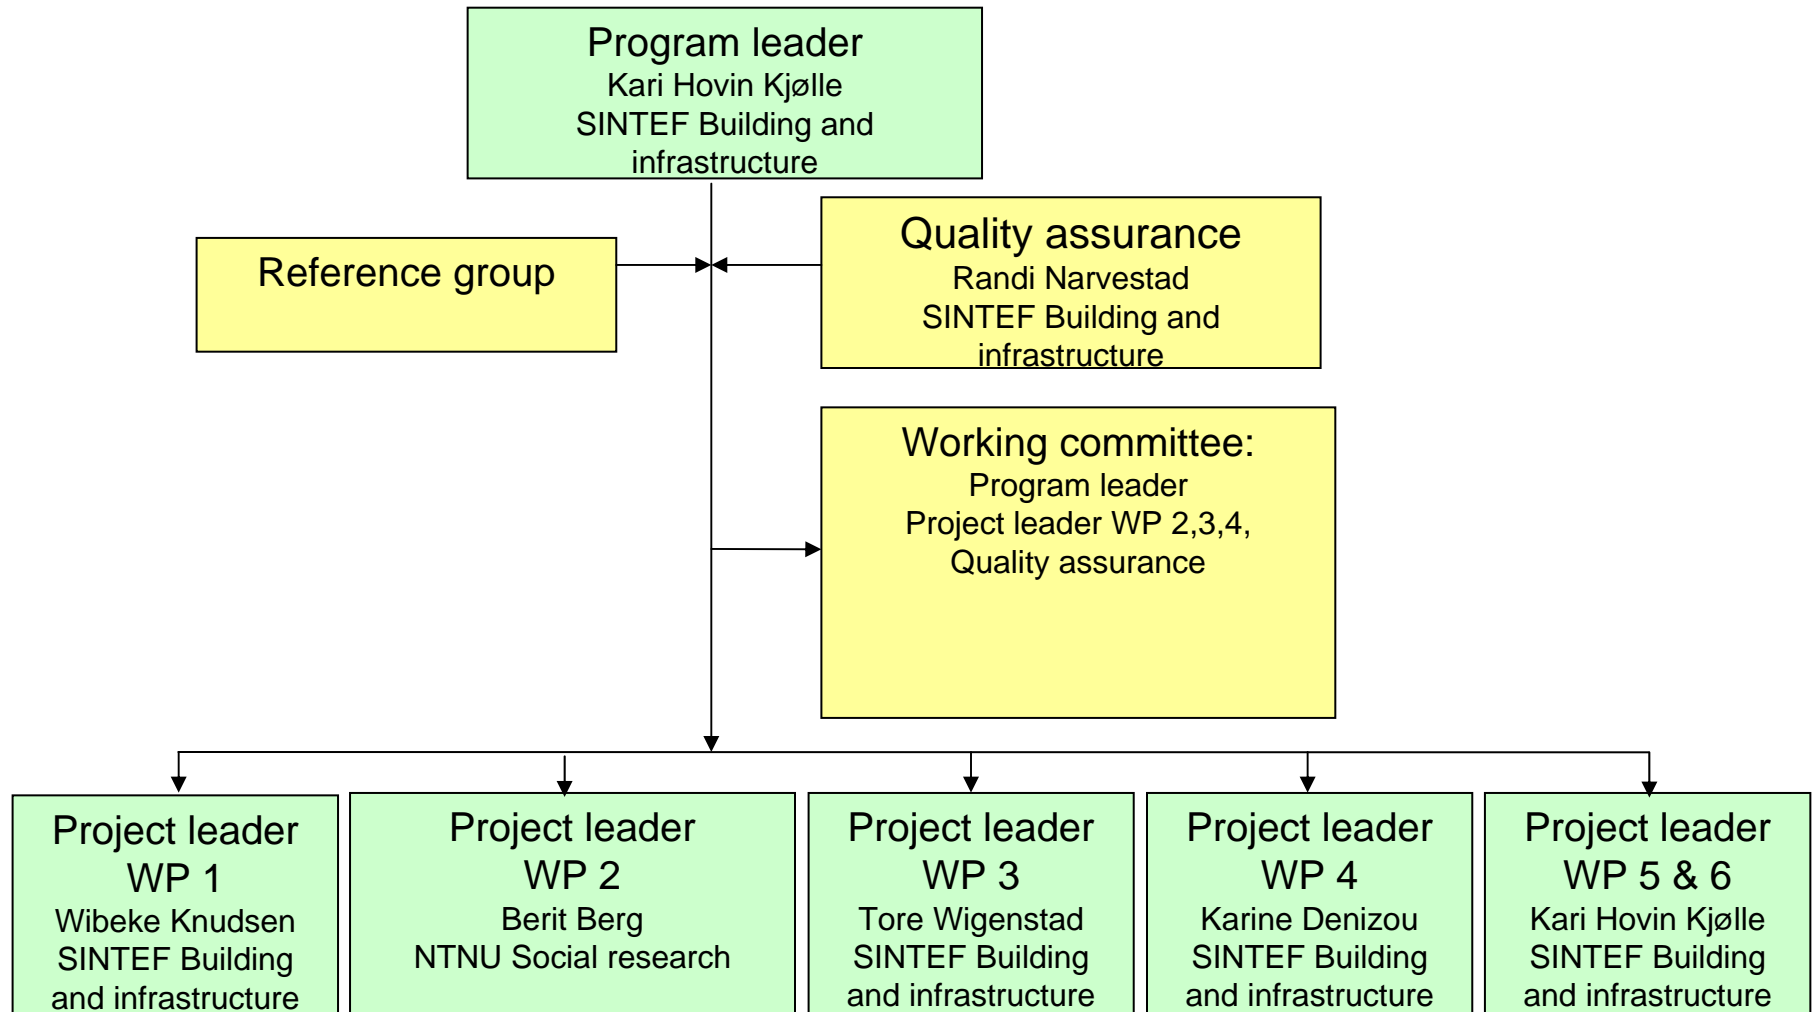

# Research activities

- Theory: Knowledge status
- Empirical data: Case studies of rehabilitated post war multi storey housing.
  - Inspections and measurements
  - Document studies
  - Interviews with residents and central actors in the projecting and building processes
- Demonstration buildings
  - New knowledge will be tested and developed through demonstration buildings.

# Work packages

# The program organization

# Communication of results

- The website of the research program:  
**[www.sintef.no/projectweb/boligoppgradering](http://www.sintef.no/projectweb/boligoppgradering)**
- Reports, articles and presentations will be put on the website.
- Workshop
  - Every six months a workshop with the advisory board will be held.
  - Advisory board: representatives from urban municipalities, housing cooperations, building industry, architects, universities and Ministry of local government and regional development.
  - The workshops are arenas for exchange of experience and competence spread.
- Demonstration buildings
  - Knowledge demonstration through ideal projects.

# WP 2 Management and decision processes

- WP 2 will study the municipalities' work with planning, arranging, and evaluating housing for different groups in need for social services.
- Housing for “disadvantaged”  
Heterogeneous group:
  - Drug/ alcohol abuse and/or mental health problems
  - Physically disabled
  - Refugees
  - Economic and social disadvantaged
  - Compound problems

# WP 3 Environmental friendly energy use

WP 3 will study energy efficiency improvement and sustainable energy sources in post war multi storey housing, to contribute to release some of the great potential for energy savings.

Brogården, Allingsås, Sweden

# WP 4 Universal design

- WP 4 will study the challenges and the possibilities for universal design of post war multi storey housing.
- Universal design is treated as a superior strategy for usability in buildings, products, and environments.
  - As many residents as possible should be able to master everyday life.
  - Equal opportunities for all residents.

# WP 5 Multidisciplinary challenges

## ■ Economy

- The economic priorities among the residents
- Costs, support and bank loan arrangements
- Profitable?

## ■ Attitudes

- Attitudes towards disadvantaged groups
- Attitudes towards groups associated with universal design
- Neighbourhood image
- Attitudes towards the environment

## ■ Organizational challenges

- Decision making processes in housing cooperatives
- Multicultural residential environments
- The connection between organizational challenges and technical solutions
- Relocation of residents during the rehabilitation process

## ■ Knowledge shortage

- Acknowledgement among architects and in the building industry of rehabilitation projects and universal design?
- Knowledge shortage, technical and aesthetical
